Executive Director  
500 N. Main Street,  
Monroe, NC 28112

Re: Water and Sewer System  
Development Fee Study

Dear Mr. Goscicki,

Stantec is pleased to present this Final Report on the Water and Sewer System Development Fee Study that we performed for Union County, North Carolina. We appreciate the professional assistance provided by you and all of the members of the County staff who participated in the Study.

If you have any questions, please do not hesitate to call us at (202) 585-6391. We appreciate the opportunity to be of service to the County, and look forward to the possibility of doing so again in the near future.

Sincerely,

A handwritten signature in black ink, appearing to read "David A. Hyder".

# 1. INTRODUCTION

Stantec Consulting Services Inc. (Stantec) has conducted a Water and Sewer System Development Fee Study (Study) for Union County's water and sewer systems (hereafter referred to as the "County" or "Utility"). This report presents the results of the comprehensive Study, including background information, legal requirements, an explanation of the calculation methodology employed, and the results of the analysis.

## 1.1 BACKGROUND

A system development fee is a one-time charge paid by a new connection to recover a portion or all of the cost of constructing water and sewer system capacity. The fees are also often assessed to existing customers requiring increased system capacity. In general, system development fees are based upon the costs of utility infrastructure including, but not limited to, water supply facilities, treatment facilities, effluent disposal facilities, and transmission mains. System development fees serve as the mechanism by which growth can "pay its own way", and minimize the extent to which existing customers must bear the cost of facilities that will be used to serve new customers.

The County currently assesses water and sewer system development fees (currently called "Capacity Fees") that are designed to recover the cost of water and sewer capacity from new connectors to each respective system. In an effort to comply with the new Public Water and Sewer System Development Fee Act, Session Law (S.L.) 2017-138, the County has retained the services of Stantec Consulting to calculate updated system development fees for each system.

## 1.2 LEGAL REQUIREMENTS

The new Public Water and Sewer System Development Fee Act, S.L. 2017-138, also known as House Bill 436 ("HB 436") became law on July 20, 2017 and grants local government entities that own or operate municipal water and wastewater systems, the authority to assess system development fees for the provision of water and sewer service to new development. The legislation defines "New Development" as:

- The subdivision of land.
- The construction, reconstruction, redevelopment, conversion, structural alteration, relocation or enlargement of any structure which increases the number of service units.
- Any use or extension of the use of land which increases the number of service units.

Given the legislation's definition of new development, existing structures which connect to the water and/or sewer system would be excluded from the system development fees (i.e. an existing home on well and/or septic which connects to the water and/or sewer system).

The legislation outlines the following procedural requirements that must be followed in order to adopt a system development fee:

- **Requirement 1:** The fee should be calculated in a written analysis (“SDF Analysis”) prepared by a financial professional or licensed professional engineer (qualified by experience and training or education) who employs generally accepted accounting, engineering, and planning methodologies to calculate system development fees for water and sewer systems, including the buy-in, incremental cost or marginal cost, and combined costs methods for each service; and that (1) documents the facts and data used in the analysis and their sufficiency and reliability; (2) provides analysis regarding the selection of the appropriate method of analysis; (3) documents and demonstrates reliable application of the methodology to the facts and data, including all reasoning, analysis, and interim calculations underlying each identifiable component of the system development fee; (4) identifies all assumptions and limiting conditions affecting the analysis and demonstrates that they do not materially undermine the reliability of the conclusions reached; (5) calculates a system development fee per service unit of new development and includes an equivalency or conversion table to use in determining the fees applicable for various categories of demand; and (6) covers a planning horizon of between 10 and 20 years.
- **Requirement 2:** The SDF Analysis must be posted on the County's website, and the County must solicit comments and provide a means by which people can submit their comments, for a period of at least 45 days.
- **Requirement 3:** Comments received from the public must be considered by preparer of the SDF Analysis for possible adjustments to the analysis.
- **Requirement 4:** The County Council must hold a public hearing prior to considering adoption of the SDF Analysis (including any adjustments made as part of the comments received by County).
- **Requirement 5:** The County must publish the system development fee in its annual budget ordinance.
- **Requirement 6:** The County cannot adopt a fee that is higher than the fee calculated by the SDF Analysis.
- **Requirement 7:** The County must update the SDF Analysis at least every five years.

In addition to the procedural requirements listed above, HB 436 provides specific requirements pertaining to the calculation of the system development fees. These requirements are highlighted within the body of this report in concert with the calculation of the system development fees for the County.

## 1.3 STUDY OBJECTIVE

The objective of this Study is to:

1. Determine the system development fees for water and sewer service based upon requirements created by the new Public Water and Sewer System Development Fee Act, S.L. 2017-138.

## 1.4 GENERAL METHODOLOGY

There are three primary approaches to the calculation of system development fees, all of which are outlined within the new Public Water and Sewer System Development Fee Act, S.L. 2017-138. Each of the approaches are discussed below.

### *Buy-In Method*

This approach determines the system development fees solely on the existing utility system assets. Specifically, the replacement cost of each system's major functional components serve as the cost basis for the system development fee calculation. This approach is most appropriate for a system with considerable excess capacity, such that most new connections to the system will be served by that existing excess capacity and the customers are effectively "buying-in" to the existing system.

### *Incremental/Marginal Cost Method*

The second approach is to use the portion of each system's multi-year capital improvement program (CIP) associated with the provision of additional system capacity by functional system component as the cost basis for the development fee calculation. This approach is most appropriate where 1) the existing system has limited or no excess capacity to accommodate growth, and 2) the CIP contains a significant number of projects that provide additional system capacity for each functional system component representative of the cost of capacity for the entire system.

### *Combined Cost Method*

The third approach is a combination of the two approaches described above. This approach is most appropriate when 1) there is excess capacity in the current system that will accommodate some growth, but additional capacity is needed in the short-term as reflected in each system's CIP, and 2) the CIP includes a significant amount of projects that will provide additional system capacity, but does not necessarily have a sufficient number of projects in each functional area to be reflective of a total system.

### **1.4.1 Methodologies and Restriction of Proceeds**

While HB 436 allows for the use of any one of the three methodologies discussed above, it specifies restrictions on how the revenues generated by the fees calculated using each methodology may be

utilized. Table 1-1 summarizes each of the three methodologies, their typical application, and restriction of how the revenues can be utilized for each.

**Table 1-1 Description of Methodologies & Restriction to Proceeds**

Methodology / Approach:	Description:	Often Used by Systems with:	Fee Proceeds Allowed for:
<b>Buy-In Method</b>	New development shares in <u>capital costs previously incurred</u> which provided capacity for demand arriving with new development needs.	Excess capacity.	Expansion and/or rehabilitation projects. Since the buy-in method reimburses the system for certain past investments, proceeds can be treated as unrestricted.
<b>Combined Cost</b>	Combination of Buy-In and Incremental / Marginal Cost methods	Some excess capacity but short term additional capacity is needed and identified in the CIP.	Professional services costs in development of new fees and costs <u>related to new development only</u> (construction costs, debt service, capital, land purchase, other costs etc.).
<b>Incremental / Marginal Cost</b>	New development shares in <u>capital costs to be incurred in the future</u> which will provide capacity for demand arriving with new development needs.	Limited or no excess capacity and a CIP which will provide significant additional capacity.	Restricted in the same as manner the Combined Cost Approach.

Our project team reviewed with County staff the available capacity in the County's water and sewer systems and the planned capital projects that will add capacity to each system. Given that the County has some existing capacity in its current water and sewer systems, as well as significant capital spending planned over the next 17 years, it appears that the Combined Approach would be most appropriate approach for the County. While this approach appears to be most appropriate for the County, our analysis includes the calculation of the system development fees under each methodology.

## 2. BASIS OF ANALYSIS

The fundamental calculation used to determine the system development fees under each methodology is presented in Figure 2-1.

**Figure 2-1 System Development Fee Calculation**

$$\text{System Development Fee} = \frac{\text{Total System Value} - \text{Credits}}{\text{System Capacity}}$$

Each of the key components of the calculation vary depending on the specific methodology employed. Table 2-1 presents the key components for each methodology.

**Table 2-1 System Development Fee Components by Methodology**

Methodology	Total System Value	Credits	System Capacity
<b>Buy-In Method</b>	<ul style="list-style-type: none"> <li>The replacement cost new less depreciation (RCNLD) of the County's <u>existing</u> major water and sewer system components</li> </ul>	<ul style="list-style-type: none"> <li>Any assets not funded by the County (grants, developer funded)</li> <li>All outstanding principal on existing system debt</li> </ul>	<ul style="list-style-type: none"> <li>Existing system capacity</li> </ul>
<b>Combined Cost</b>	<ul style="list-style-type: none"> <li>The replacement cost new less depreciation (RCNLD) of the County's <u>existing</u> major water and sewer system components,</li> <li><b>Plus</b> the cost of <u>planned capital projects</u> identified partially or entirely as providing additional capacity to the County's current existing system</li> </ul>	<ul style="list-style-type: none"> <li>Same as Buy-In Approach</li> <li><b>But</b> total credit used in calculation must be at least 25% of system value</li> </ul>	<ul style="list-style-type: none"> <li>Existing system capacity</li> <li><b>Plus</b> capacity added from capital improvement plan</li> </ul>
<b>Incremental / Marginal Cost</b>	<ul style="list-style-type: none"> <li>The cost of <u>planned capital projects</u> identified partially or entirely as providing additional capacity to the County's current existing system</li> </ul>	<ul style="list-style-type: none"> <li>Same as Combined Approach</li> </ul>	<ul style="list-style-type: none"> <li>Capacity added from capital improvement plan</li> </ul>

The following sections, 2.1, 2.2, and 2.3, outline the details of the analysis completed during the Study to identify the components of the system development fee calculation discussed above, which were then used to calculate the water and sewer system development fees.

## 2.1 TOTAL SYSTEM VALUE

The County provided a detailed asset inventory which included an asset identification number, a description of the asset, cost center, asset type, year placed in service, original cost, net book value and useful life for each water and sewer system asset through FY 2018. These assets were classified by each major system function, and a replacement cost new less depreciation was calculated for each asset record using the data provided by the County and the Engineering News Record Construction Cost Index. Schedule 1 in Appendix shows the RCNLD for the County's existing water and sewer systems based upon asset records provided by County staff.

The County also provided a detailed 17 year capital improvements plan (CIP), which included the project description, annual spending, and an indication of whether the project was designated as a growth or rehabilitation<sup>1</sup>. The growth designated projects were included in the system value for the determination of the system development fees under both the Combined and Incremental Approach. The CIP was classified by each major system function, similar to the assets. Schedule 2 in the Appendix shows the CIP included in the total system value.

## 2.2 CREDITS

HB 436 requires that the system development fee calculations include provisions for credits against the value of the system to account for assets that were not funded by the municipality and for assets with outstanding debt liabilities. The credits included in this Study are discussed in the following subsections.

### 2.2.1 Principal on Outstanding Debt

Once the capacity costs were identified for each functional component, an adjustment was then made in the form of a credit for the principal of all outstanding debt that will be recovered in user fees after new customers connect to the water and/or sewer systems. Upon connection to either system, new customers will pay monthly user rates associated with the use of utility service. In addition to systems operating costs, the user rates recover the principal and interest payments associated with the debt incurred to fund the capital costs of each water and sewer system. Therefore, in order to avoid a double recovery of those capital costs in the system development fees and user rates, a credit is provided based

---

<sup>1</sup> Designation between growth and R&R came from Water System Planning Update and Wastewater Treatment Planning Update reports prepared by Black & Veatch for Union County Public Works and dated June 27, 2016.

on the total principal outstanding on debt for each of the water and sewer systems, respectively. Schedule 3 in Appendix of this report shows the annual principal amounts used in this analysis.

## 2.2.2 Contributed and Grant Funded Assets

Water and sewer system assets that were donated to the County or were funded with grants must be excluded from the system development fee calculation. As the County did not incur the cost of purchasing and/or constructing the asset, the County cannot legitimately include the costs in the system value used to determine the system development fee.

HB 436 requires that the total credit applied in the system development fee calculations be equal to at least 25% of the total system value when the Combined or Incremental cost approach is employed. Tables 2-2, 2-3 and 2-4 present the details for determination of the net system value under each method of calculation.

**Table 2-2 Buy-In Method Net System Values by System**

Buy – In Method	Water	Sewer
Total Replacement Cost New Less Depreciation	\$264,695,928	\$273,516,425
Outstanding Principal	(46,201,185)	(72,951,535)
Contributed/Donated Assets	(51,127,731) <sup>2</sup>	(72,984,689)
Grants	(225,434)	(1,961,300)
<b>Buy – In Method Net System Value</b>	<b>\$167,141,578</b>	<b>\$125,618,901</b>

**Table 2-3 Combined Method Net System Values by System**

Combined Method	Water	Sewer
Total Replacement Cost New Less Depreciation	\$264,695,928	\$273,516,425
Growth Related Capital Projects	366,525,000	237,230,501
Outstanding Principal	(46,201,186)	(72,951,535)
Contributed/Donated Assets	(51,127,731) <sup>2</sup>	(72,984,689)
Grants	(225,434)	(1,961,300)
Other Credits (To satisfy 25% requirement)	(60,250,882)	-
<b>Combined Method Net System Value</b>	<b>\$473,415,696</b>	<b>\$362,849,402</b>
Total Credits as % of Total System Value	25%	29%

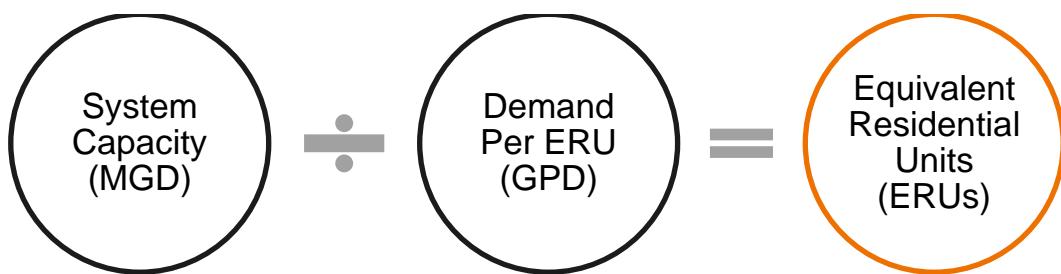

<sup>2</sup> Total includes \$141,756 of contributed land. The rest of the contributed assets are made up of linear feet of pipe.

**Table 2-4 Incremental Method Net System Values by System**

Incremental Method	Water	Sewer
Growth Related Capital Projects	\$366,525,000	\$237,230,501
Other Credits (To satisfy 25% requirement)	(91,631,250)	(59,307,625)
<b>Incremental Method Net System Value</b>	<b>\$274,893,750</b>	<b>\$177,922,876</b>
Total Credits as % of Total System Value	25%	25%

## 2.3 SYSTEM CAPACITY REVIEW

Once Net System Value was determined, the next step was to determine the water and sewer system's capacities as stated in terms of units of service, defined as equivalent residential units (ERUs) for purposes of this study. Expressing the system capacities in terms of ERUs allows for the development of the unit pricing of capacity which is essential for the determination of system development fees. The total system capacity (treatment capacity in million gallons per day for each system) divided by the demand per ERU (approximate usage of each equivalent residential unit) in gallons per day is equal to the total number of ERUs the County can serve.

### 2.3.1 System Capacity

The County's water and sewer systems consist of numerous functional components such as water treatment, source of supply, transmission and storage. Each of the functional components have a physical or regulatory permitted capacity. While treatment, supply, and disposal capacities are generally accepted to be either the physical or regulatory permitted capacity of such facilities and are readily available, transmission system capacities are more difficult to quantify. As such, it is common to define the capacity for all functional components (including the transmission facilities) based on system's total treatment capacity. This approach was utilized for the determination of the system capacities for the of the County's utility systems. The rationale behind this decision is that even if the transmission and pumping portion of either system is larger than that system's treatment capacity, the only capacity the system can offer to its connections is its total treatment capacity.

Table 2-5 summarizes the capacity by function used in the system development fee calculation. It should be noted that only the existing capacity is used in the Buy-In approach and only the incremental capacity

is used in the Incremental approach. The combined system capacity is used to determine the system development fees using the combined approach.

**Table 2-5 System Capacity by Function**

<b>Water Capacity (MGD)</b>		<b>Sewer Capacity (MGD)</b>	
<b>Source of Supply/ Treatment / Transmission / Pumping<sup>1</sup></b>		<b>Treatment/ Disposal / Transmission / Pumping <sup>2</sup></b>	
<b>Existing Capacity:</b>		<b>Existing Capacity:</b>	
Catawba WTP	20.00 <sup>3</sup>	Monroe WRF	2.65
Lancaster (Leased) WTP	3.00	McAlpine	3.00
Anson WTP	4.00	Water Reclamation Facilities	8.15
		12 Mile Creek Phase 1	1.50 <sup>4</sup>
<b>Total Existing Water System Capacity</b>	<b>27.0</b>	<b>Total Existing Sewer System Capacity</b>	<b>15.3</b>
<b>Incremental Capacity:</b>		<b>Incremental Capacity:</b>	
Yadkin Phase 1	12.00	Monroe	2.00
Yadkin Phase 2	8.00	12 Mile Creek	1.50
		Lower Crooked Creek	3.00
<b>Total Incremental Water System Capacity</b>	<b>20.0</b>	<b>Total Incremental Sewer System Capacity</b>	<b>6.5</b>
<b>Total Combined Water System Capacity</b>	<b>47.0</b>	<b>Total Combined Sewer System Capacity</b>	<b>21.3</b>

<sup>1</sup> Limits transmission & pumping capacity to water system's total treatment capacity and represents water system maximum day capacity

<sup>2</sup> Limits transmission & pumping capacity to sewer system's total treatment capacity and represents sewer system maximum month capacity

<sup>3</sup> Includes 2.0 MGD expansion as County has already funded project and project is nearing completion prior to start of FY 2019

<sup>4</sup> Includes 1.5 MGD expansion from 6.0 to 7.5 MGD as County has already funded project and project is nearing completion prior to start of FY 2019

### 2.3.2 Demand per ERU

To facilitate the calculation of the system development fees it was necessary to determine the representative demand per service unit or ERU. To calculate the demand per ERU, the County was able to provide six years of annual historic water and sewer residential consumption and residential connections. The average of the last six years of monthly water usage per residential connection is 5,650 gallons per month, which results in an average daily usage per ERU of 188 gallons per day. Given that the water system capacity as discussed in Section 2.3.1 of this report is defined in maximum day, a maximum day peaking factor of 1.68 is applied to the average use to convert average gallons per day into maximum gallons per day, which equates to 316 gallons per day. The peaking factor of 1.68 is a 10-year average of peaking factor provided by staff.

A similar approach was utilized to define the sewer system demand per ERU. The average of the last six years of monthly water usage per residential connection is 5,910 gallons per month, which results in an average daily usage per ERU of 197 gallons per day. Given that the sewer system capacity as discussed in Section 2.3.2 of this report is defined in maximum month, a maximum month peaking factor of 1.25 is applied to convert average gallons per day into maximum gallons per month of 246 maximum gallons per month.

The calculated demands per ERU for the water and sewer systems are shown in Table 2-6.

**Table 2-6 Calculation of Demand per ERU**

Component	Water	Sewer
Average Daily Use (gallons)	188	197
Peaking	1.68	1.25
<b>Demand (gallons per day) = 1 ERU</b>	<b>316</b>	<b>246</b>

Once demand per ERU was identified, the total system capacity in MGD was divided by the demand per ERU, defining the total number of possible connections to each system as shown in Table 2-7.

**Table 2-7 System Capacity in ERUs by Methodology and by System**

Methodology	Water ERU's	Sewer ERU's
Buy-In	85,479	62,233
Combined	148,797	88,672
Incremental	63,318	26,439

## 3. RESULTS

This section summarizes the results of the study, the calculated system development fees under each approach, conclusions and recommendations.

### 3.1 CALCULATED SYSTEM DEVELOPMENT FEE AMOUNTS

To calculate the system development fees, the net system value described in Section 2 for each methodology was divided by the system capacity in ERUs, as shown in Table 2-7, to determine the capacity cost per ERU. Table 3-1 presents the system development fees calculated per ERU under each methodology as well as the current system development fees charged by the County. The detailed calculations for each approach are presented in Schedules 4 through 9 in the Appendix.

**Table 3-1 Water System Development Fee Schedule per ERU<sup>3</sup>**

Calculation Methodology	Water	Sewer	Total
Buy-In	\$2,000	\$2,070	\$4,070
Combined	\$3,200	\$4,200	\$7,400
Incremental (Maximum Allowable Fees)	\$4,400	\$6,930	\$11,330
Current Fees	\$1,200	\$3,090	\$4,290

Table 3-1 demonstrates that the fees calculated under the combined and incremental methodologies are higher than those currently charged by the County. The table also demonstrates that the maximum fees that the County could impose are defined by the Incremental approach.

The system development fees shown in Table 3-1, represent the fees per unit of service defined as an ERU. The County currently defines an ERU as a single family residential customer with a 3/4" meter size connection. The unit cost per ERU or system development fee per a 3/4" meter connection is then scaled by meter size to develop the system development fee schedule for customer requiring meters up to 1 ½" in size. Currently, customers requiring a meter larger than 1 ½" are charged a fee based on estimated use. While this approach is acceptable, it can result in some administrative complexity and difficulty in dealing with new connections that require larger meters. To address these issues we would recommend that the County consider charging all new development system development fees based on meter size. This approach would simplify the process of determining the system development fees for larger metered customers while still reflecting the potential demands associated with each meter.

---

<sup>3</sup> Water calculated fees are rounded down to the nearest hundredth and wastewater calculated fees are rounded down to the nearest tenth.

Tables 3-2 and 3-3 below provide a schedule of the existing and calculated system development fees by meter size for each of the methodologies.

**Table 3-1 Water System Development Fees by Meter Size**

Meter Size	Current Fee	Buy-In	Combined	Incremental
3/4"	\$1,200	\$2,000	\$3,200	\$4,400
1"	\$2,900	\$3,300	\$5,300	\$7,300
1 1/2"	\$5,800	\$6,600	\$10,600	\$14,600
2"	\$7,300 - \$9,600*	\$10,600	\$17,000	\$23,400
3"		\$20,000	\$32,000	\$44,000
4"		\$33,300	\$53,300	\$73,300
6"		\$66,600	\$106,600	\$146,600

\*Historical range of water system development fees paid for new connections requiring meters larger than 1 ½"

**Table 3-2 Sewer System Development Fees by Meter Size**

Meter Size	Current Fee	Buy-In	Combined	Incremental
3/4"	\$3,090	\$2,070	\$4,210	\$6,930
1"	\$7,720	\$3,450	\$7,030	\$11,570
1 1/2"	\$15,440	\$6,890	\$14,010	\$23,070
2"	\$18,800 - \$24,710*	\$11,030	\$22,430	\$36,930
3"		\$20,700	\$42,100	\$69,300
4"		\$34,500	\$70,180	\$115,520
6"		\$68,990	\$140,310	\$230,970

\*Historical range of sewer system development fees paid for new connections requiring meters larger than 1 ½"

It should be noted that the County has only had 12 customers with 2" and larger meters join the water and sewer system since 2012, when the current fees were established.

## 3.2 CONCLUSIONS AND RECOMMENDATIONS

Based upon the analysis presented herein, we have developed the following conclusions and recommendations:

- Based on the availability of existing capacity in the County's water and sewer systems and the significant expansion related capital projects identified in the County's capital improvements plan, it appears that the combined approach would be the most appropriate methodology for the determination of system development fees for Union County.
- The maximum allowable system development fees that the County can impose are determined based on the Incremental Approach and total \$4,400 per ERU for water and \$6,930 per ERU for sewer.
- We recommend that the County review its development fees at least every five years to ensure that it follows requirements established by the Public Water and Sewer System Development Fee Act, S.L. 2017-138 and to ensure that they remain fair and equitable and continue to reflect its

current cost of capacity. As the County continues to expand its facilities, future changes in technology, demands, development patterns, or other factors may necessitate additional adjustments to its development fees.

- We recommend that as part of any system development fee update, the County also evaluate the most appropriate accepted methodology for calculating its system unit cost of capacity as system capacity will change over time.

## Disclaimer

*This document was produced by Stantec Consulting Services, Inc. (“Stantec”) for Union Count and is based on a specific scope agreed upon by both parties. Stantec’s scope of work and services do not include serving as a “municipal advisor” for purposes of the registration requirements of the Dodd-Frank Wall Street Reform and Consumer Protection Act (2010) or the municipal advisor registration rules issued by the Securities and Exchange Commission. Stantec is not advising the County, or any municipal entity or other person or entity, regarding municipal financial products or the issuance of municipal securities, including advice with respect to the structure, terms, or other similar matters concerning such products or issuances.*

*In preparing this report, Stantec utilized information and data obtained from Union County or public and/or industry sources. Stantec has relied on the information and data without independent verification, except only to the extent such verification is expressly described in this document.
